

Sohan Dhungel

Software Developer

Kalanki, Kathmandu, Nepal +977 9814234358 sohandhungel05@gmail.com github.com/madaxe05 linkedin.com/in/sohan-dhungel

Profile

Computer Engineering graduate (Tribhuvan University, 2026), now a Software Developer at Octacore Solutions in Kathmandu. I ship Flutter apps end to end under two Google Play accounts, and build outside of work in Godot and Solidity. Comfortable owning a feature from data model to release.

Experience

Software Developer Aug 2026 - Present

Octacore Solutions, Kathmandu

- Kept on after the internship below to work on the same production codebase full-time.

Software Engineering Intern Jun 2026 - Aug 2026

Octacore Solutions, Kathmandu

- First professional exposure to a team codebase: feature branches, code review and a real release process, not just solo assignments.

Published Applications

Production apps live on Google Play across two developer accounts, **Veritas Studios** and **Mad Axe**: build, publish, and the store listing, all handled solo.

Veritas Subscription Guard, tracks renewals	Flutter, Riverpod, Drift	Veritas PDF, offline PDF toolkit	Flutter
Groccressy, shopping list with price history	Flutter, Firestore, Gemini	ColorJoy, 827-page kids colouring book	Flutter, offline
HuePilot, colour palette generator	Flutter, Firebase	Displayy, solid-colour screen fill	Flutter
GTA Cheats: All Codes	Flutter, AdMob	GTA 6 Cheat Codes	Flutter
Merge 1024, puzzle game	Flutter	Jetpack Max, arcade flying game	Godot 4
Daily Word, word guess game	Flutter		

Selected Projects

Blockchain Document Verification Solidity, React, Node

A document is hashed with SHA-256, the hash goes on an Ethereum contract, and a later upload of the same file is checked against it, so an edited or forged copy fails the check. Full-stack app: Solidity contracts, a React and Node front end, Web3.js for the chain calls. [GitHub ↗](#)

Gold Price Prediction TensorFlow, Keras

An LSTM model trained on historical gold price time series. Built the full pipeline myself: cleaning the data, windowing it for the model, training, and plotting predicted against actual price in Matplotlib. [GitHub ↗](#)

Anna Chain Protobytes Hackathon 2.0

Built with three teammates (Team Berserkers) at an inter-college hackathon: a React app that matches restaurants with surplus food to nearby farmers, backed by Firebase Functions and a small Python classifier for sorting listings.

Realm Guard, Arrow Escape, Kingdom of Aetheria Godot 4, GDScript

Three Godot games I'm building for a Play Store and App Store release. Realm Guard is a 35-level tower defence; before any build ships, a script plays every level headlessly to check the difficulty curve actually holds.

Technical Skills

Languages	Dart, Java, TypeScript, JavaScript, Python, C/C++, SQL, Solidity, GDScript
Mobile	Flutter, Firebase, Riverpod, Drift, SQLite, Hive, REST APIs, AdMob, Play Store releases
Web	React, Next.js, Tailwind CSS, Node.js, Express, Web3.js, Vercel
Data and ML	TensorFlow, Keras, Pandas, NumPy, Matplotlib, LSTM models, MySQL, Firestore
Tools	Git, GitHub, VS Code, Figma, Godot 4, Google Colab, MATLAB, LaTeX

Education

BE Computer Engineering 2022 - 2026

Advanced College of Engineering and Management, Tribhuvan University, Kathmandu

Higher Secondary, Science 2020 - 2022

Hetauda School of Management, Hetauda
PCM and Computer Science

Activities

Protobytes Hackathon 2.0

Inter-college participant, built Anna Chain with Team Berserkers.

Figma Workshop

UI/UX design principles and prototyping techniques.

Relevant Coursework

Data Structures and Algorithms, Machine Learning and AI, Software Engineering, Data Mining, Project Management, MySQL, UML.
